DETAILED ACTION

1. Applicant's election of claims 3-9 with traverse is acknowledged. PCT practice does not preclude an election/restriction requirement to be made for the US case. Also, claims 5-7 are being withdrawn from examination as being to different embodiments of the apparatus of claim 3. The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 4. Claim 3 recites the limitations "the pin electrode", "the middle section", "the air cap 40", "the front surface", "the barrel 2", "the coating material delivery port", "the upper and lower portions...", "the square sections 40d and 40e", and "the diametrical direction". There is insufficient antecedent basis for these limitations in the claim.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 3, 4, 8, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sickles '482 in view of Binoch.

Sickles '482 discloses an electrostatic coating spray gun comprising a pin electrode 150 in a middle region of an air cap 70 attached to a front surface portion of a barrel 78 in the main body of the gun through a coating material delivery port 84; square sections 118 and 120 protruding forward from the delivery port 84 are formed at upper and lower positions in a diametrical direction of the air cap with the pin electrode 150 therebetween; electrodes 110 and 112 are accommodated in the interior of the square sections 118 and 120; and high dc voltage is applied between the grounding and the electrodes with the pin electrode grounded. Sickles does not disclose the electrodes being insulatively shielded. Binoch teaches an electrostatic coating spray gun comprising insulated. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Sickles '482 by providing insulation to the electrodes since such arrangements have already been taught by Binoch. Sickles also does not disclose the pin electrode 150 protruding from the middle region of the air cap, however, such a modification would have involved a mere change in the size of a component which is generally recognized as being within the level of ordinary skill in the art. Grounding the pin electrode by a wiring cable would also have been a matter of design choice.

Conclusion

Application/Control Number: 10/550,677 Page 4

Art Unit: 3752

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Shilton et al., Hastings et al., Lind, and Sickles '349 are pertinent to Applicant's invention.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Davis D. Hwu whose telephone number is 571-272-4904. The examiner can normally be reached on 8:00-4:30. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Shaver can be reached on 571-272-4720. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
